ALLUMINIUM FITTINGS

Prefab Structural Works

Glaven Tech supplies and installs precast concrete structural units. We have the proven industry experience of customised service through the provision of prefabricated concrete solutions from the design, supply and construction of various prefabricated concrete structures, through to planning, mobilization, manufacturing, constructing and maintaining your structures. Glaven Tech enjoys the challenge of designing and bringing that design to reality that out a unique touch to your property. Amalgamated with quality prefabricated concrete materials and a commitment to construction excellence, Glaven Tech provides a single-source solution along with the collective effort of the team and engineers that focuses on customer satisfaction thus bringing with it comfort, safe and environmentally friendly services, including:

- # Perimeter walls and cottages.
- # Site Offices and satellite clinics
- # Staff quarters and accommodation units
- # Classroom and church blocks.

Solar Systems Engineering

Energy Audits: Glaven Tech gathers preliminary data on climatic and environmental conditions, irradiation levels and available roof or ground area. A comprehensive energy audit and analysis is done that ascertains your current energy consumption and power requirements, and advice on efficient energy solutions that optimize your power consumption.

Site Assessments: Glaven Tech employs its industry specific knowledge with its engineers to evaluate all the physical aspects of the site from what the ideal location of the solar system would be to ensure optimal performance as well as longevity.

System Design: We do a scope of work and systems design, to populate your system with numerous configurations considered to ensure performance guaranteeing system.

System Installation and commissioning: Glaven Tech utilizes the best possible equipment and the constructed design to achieve the greatest efficiency to effectively install the system. Our in-house team of electricians and technicians installs, commissions and validates the system under an experienced and qualified engineer.

System Monitoring and Maintenance: Glaven Tech monitors and maintains already installed systems through trouble-shooting, fault finding and repair of the solar system.
